Education

University of Michigan — Ann Arbor, MI Expected May 2028
Bachelor of Science in Information, User Experience Design GPA: 3.94
Minor in Industrial Design

Client Work

Vietnamese Noodle House — Contract UX/UI Designer & Developer **2026**

- Audited, redesigned, and built a family restaurant's responsive website: 6 pages for 2 locations and a food truck.
- Created a select-then-confirm location flow to stop wrong-location orders; owners report mistaken orders fell from about 8 to about 1 a month since the July launch.
- Rebuilt an 11-page PDF menu as a responsive ~50-item menu page with a sticky category nav.
- Worked within the restaurant's existing ordering platforms (MenuDrive, Lavu) and fixed a contact form that showed “Message sent!” without delivering anything.

Evolve Salon & Spa — Web & Visual Designer **2025**

- Launched a responsive website for a full-service salon and spa, organizing services, team, and policies.
- Restructured service information across hair, waxing, and esthetics; owners report fewer customer calls asking about services.
- Developed a visual system based on the salon's existing personality and physical space.

Projects

MyMuseum — Product Designer & Developer **2026**

- Designed and built a live 3D gallery platform where artists upload work, auto-generate a walkable museum, and share it by link.
- Interviewed 5 artists to define needs around scale, sequence, and publishing speed; ran a 5-person usability study on the first prototype.
- Turned 4 testing findings into shipped changes: museums auto-sized to the collection, a Grid View so no artwork is 3D-only, simpler avatars, and private artist messaging.
- Built the creator workflow: upload, auto-generated layout, share link, visibility, and editing after publishing.

CoursePilot — Product Designer **2026**

- Designed an AI planning assistant inside Canvas in Figma, from 5 student interviews on missed announcements, prioritization, and trust in AI.
- Replaced chat-style text with task-specific responses: study plans, weekly summaries, sourced syllabus answers, and grade calculations.
- Made AI answers verifiable with sources, “Why this?” explanations, and editable plans.
- Ran 5 task-based usability sessions on the prototype and identified 5 issues to redesign, including unexplained task order and fixed time estimates.

Lamps for Autistic Children — Industrial Designer **2025**

- Collaborated with a clinic and Industrial Design Society designers to create customized lamps for children.
- Designed and fabricated a laser-cut wood lamp whose body is the lampshade, testing slot fit in raw-wood prototypes.

Skills

Design & Research: Figma, FigJam, user interviews, usability testing, prototyping, information architecture
Development & 3D: Next.js, React, React Three Fiber, Blender
Creative Tools: Illustrator, Photoshop, InDesign, Procreate, Premiere Pro
